

ScaleGone 1 & 2

Scale Elimination for Food Service Equipment

CITRYNE

All water contains calcium, which results in scale formation. ScaleGone continuously dispenses an FDA approved proprietary formulation called Citryne. It neutralizes calcium on contact leaving equipment “scale free”.

The small amount of Citryne dispensed is safe for equipment and will efficiently provide a “scale free” environment for up to six months. “No Tool” cartridge replacements are available as needed. With two model options, ScaleGone will solve any scale problem!
